PROFESSIONAL SUMMARY

For over 15 years, I have worked at the intersection of complex engineering problems and the business outcomes they unlock across global organizations including Intel, IBM, and Kyndryl. I lead distributed, cross-geo engineering teams through mission-critical full-stack initiatives and architectural strategies, bringing deep hands-on expertise in C#, Python, Angular, React, Azure, Kubernetes, advanced tooling, and CI/CD automation. My track record is built on replacing legacy systems with reliable, low-latency platforms that generate measurable results, from eliminating 40–80 hours of manual work per client monthly to cutting release cycles by up to 30%. A background that spans both engineering and business finance means every architectural decision I make is framed around the outcome it delivers to leadership, not just the code it produces.

TARGET ROLE ALIGNMENT

- Enterprise Architecture & Strategy: Proven capability to translate business needs into technical blueprints, leading cross-functional teams to deliver high-stakes engineering projects from concept to deployment.
- Full-Stack Development & Database Design: Deep expertise in architecting scalable solutions from the UI layer down to relational and NoSQL databases, ensuring data integrity, performance, and security.
- DevOps & Tooling Enablement: Demonstrated success in evaluating, implementing, and optimizing modern engineering tooling and CI/CD pipelines to accelerate release velocity and enforce quality standards.

CORE COMPETENCIES

Enterprise Architecture • Tech Leadership • People Management • Strategic IT Planning • Business-to-Tech Translation • Executive Negotiation • Cross-Functional Leadership • Cloud-Native Design • Microservices • Circuit Breaker Pattern • Event-Driven Architecture • C# • Python • Angular • React • Node.js • ASP.NET • Azure • AWS • Kubernetes • Docker • CI/CD Automation • GitHub Actions • Cloud Foundry • SonarQube • REST APIs • Agile / Scrum • MongoDB • SqlServer • Oracle • MySQL • Linux • Unix

PROFESSIONAL EXPERIENCE

Senior IT & Business Operations Analyst (Contract) | Fastlane LATAM *February 2026 – Present*

- Architected regional BI pipelines and data strategies, extracting and modeling complex operational data into actionable insights to drive proactive executive decision-making.
- Spearheaded LATAM digital transformation projects by designing and developing scalable automation tooling and architectures that systematically eliminated manual overhead across cross-functional workflows.
- Led strategic corporate initiatives, including the formulation of a comprehensive corporate carbon footprint management strategy, aligning technology with global governance.

Senior Software Application Development Engineer | Intel Corporation *April 2025 – December 2025*

- Prevented significant manufacturing losses by architecting the full-stack modernization (C#, Angular, React, Python) of a wafer-defect analysis platform, designing a resilient data and backend architecture the eliminated 2+ hours of manual analysis per daily cycle.
- Accelerated product qualification timelines for Intel Foundry by designing and developing a distributed test automation framework supporting thousands of concurrent executions.
- Eliminated costly factory-floor downtime by delivering high-reliability, mission-critical monitoring systems in collaboration with global cross-geo engineering teams.

Senior Lead Software Engineer | Kyndryl *November 2021 – April 2025*

- Drove the architecture of Kyndryl Bridge, designing large-scale, multi-tiered distributed services and database models to support global enterprise clients.
- Eliminated 40–80 hours of manual work per client monthly (including Meta, Raytheon, AMEX) by designing custom inventory and financial systems for CTO-Portico.
- Accelerated enterprise application delivery by 15% through the engineering and internal adoption of a reusable Angular Carbon UI component library.
- Upskilled 100+ regional engineers by co-leading the Learning and Development squad, establishing structured training on emerging technologies and software design patterns.

Senior Lead Software Engineer | IBM*February 2021 – November 2021*

- Ensured zero-downtime continuity of enterprise services during the high-stakes Kyndryl spin-off by migrating critical components across Angular, React, and ASP.NET.
- Reduced application delivery time by 15% by developing and integrating foundational Carbon UI components into the internal development tooling infrastructure.
- Improved deployment throughput by 8% and reduced vulnerability exposure by 5% by leading strategic technical debt remediation and code refactoring.

Senior Software Engineer | Intel Corporation*January 2018 – February 2021*

- Cut release cycle times by 15–30% by architecting end-to-end CI/CD pipelines (GitLab, Kubernetes, Cloud Foundry) for enterprise web applications.
- Led the technical delivery of enterprise-grade HR applications, overseeing full SDLC processes and facilitating Agile ceremonies as the primary technical lead.

Application Developer | Intel Corporation*February 2015 – December 2017*

- Reduced HR process execution times by 20–50% by executing the global enterprise rollout of Workday, replacing legacy HR systems.
- Governed Intel's primary employee data repository as technical owner, securing data integrity and access controls for highly sensitive organizational data.
- Standardized global release processes across the HR portfolio by engineering scalable CI/CD pipelines and maintaining core deployment infrastructure.

Production Support Specialist | Intel Corporation*September 2013 – March 2015*

- Developed and maintained human resources applications covering US and Latin America payroll, recruitment, sabbatical tracking, employee stock programs, and Workday integrations.
- Coordinated with support teams across multiple geographic regions to sustain 24/7 coverage for production HR systems, minimizing downtime impact on global workforce operations.

Production Support Specialist L3/L4 | SOIN Soluciones Integrales*April 2012 – August 2013*

- Provided L3/L4 application support for Oracle/Unix environments used by ICE (Plan PESSO), a government-critical telecommunications platform serving over 6 million active 3G mobile accounts.
- Acted as System Analyst and release owner, managing new deployment rollouts and leading migration and stabilization activities into the production environment for high-stakes government infrastructure.
- Diagnosed and resolved critical production incidents with potential impact across millions of end users, working under strict SLA obligations and coordinating with multi-team technical stakeholders.

Quality Assurance Tester | SOIN Soluciones Integrales*November 2010 – March 2012*

- Designed and executed system-level tests across pre-production and production environments, verifying functional stability and regulatory compliance ahead of critical government system releases.

EDUCATION**Master of Business Administration (MBA), Finance Specialization***2015 – 2017*

Tecnológico de Costa Rica (TEC) — Costa Rica

Licentiate Degree, Systems Engineering*2011 – 2014*

Universidad Latina de Costa Rica — Costa Rica

Bachelor's Degree, Computer Science*2008 – 2010*

Universidad de Costa Rica (UCR) — Costa Rica
