

Eduardo Centeno

Tech Lead | Senior Software Engineer | DevOps Engineer
+506 8714-1763 • ecentenoc@gmail.com • [linkedin.com/in/ecentenoc](https://www.linkedin.com/in/ecentenoc)

PROFESSIONAL SUMMARY

Senior Software Engineer with 15+ years of experience designing and delivering high-impact, mission-critical systems for global organizations including Intel, IBM, and Kyndryl. Proven ability to lead distributed, cross-geo engineering teams through complex full-stack initiatives spanning C#, Python, Angular, and React. Deep hands-on expertise in Azure, Kubernetes, CI/CD automation, and Agile delivery. Track record of replacing legacy systems with reliable, low-latency solutions that generate measurable cost savings and efficiency gains. MBA in Finance providing strong business acumen to bridge technical execution with organizational strategy.

CORE COMPETENCIES

C# • Python • Angular • React • Node.js • ASP.NET • Azure • Kubernetes • Docker • GitLab CI/CD • GitHub Actions • Cloud Foundry • SonarQube • REST APIs • Microservices • Agile / Scrum • System Architecture • Tech Leadership

PROFESSIONAL EXPERIENCE

Senior IT & Business Operations Analyst (Contract) | **Fastlane LATAM** *February 2026 – Present*

- Engineered automated business intelligence pipelines integrating Power BI and Power Automate, delivering critical data visibility to accelerate executive decision-making.
- Streamlined enterprise operations and reduced manual overhead by developing custom Python automation scripts to execute and support cross-functional company tasks.

Senior Software Application Development Engineer | **Intel Corporation** *April 2025 – December 2025*

- Architected and led full-stack modernization of an automated wafer-defect analysis platform using C#, Angular, React, and Python, replacing a legacy backend that required over two hours of manual analysis per cycle and preventing significant monthly losses from undetected microscopic defects in next-generation processor production.
- Designed and implemented a distributed test automation framework supporting thousands of concurrent test executions for upcoming Intel Foundry products, reducing manual validation overhead and accelerating product qualification timelines.
- Collaborated with cross-geo engineering teams across multiple time zones to deliver high-reliability, mission-critical monitoring systems aligned with enterprise SLAs, preventing factory-floor downtime that carried multi-thousand-dollar-per-hour cost exposure.

Senior Lead Software Engineer | **Kyndryl** *November 2021 – April 2025*

- Kyndryl Bridge — Drove architecture and design of large-scale, multi-tiered distributed applications and services using object-oriented and distributed programming principles, supporting a platform used across global enterprise clients.
- Engineered reusable Carbon UI component library in Angular that was adopted across internal development teams, accelerating new application delivery by 15% compared to the prior version baseline.
- CTO-Portico — Designed and delivered tailored solutions for Fortune 500 clients including Meta, Raytheon, and AMEX, building inventory management and cost/tax calculation systems that eliminated 40 to 80 hours of monthly manual work per client.
- Co-led the Learning and Development squad responsible for upskilling 100+ engineers across the Costa Rica organization, delivering structured training on emerging technologies and coding best practices to maintain team competitiveness.

Senior Lead Software Engineer | **IBM** *February 2021 – November 2021*

- Contributed to a large-scale platform transition to Kyndryl by coding, testing, and migrating critical components across Angular, React, and ASP.NET, ensuring continuity of enterprise services during a high-stakes organizational split.
- Built new Carbon UI components integrated into the company's internal development infrastructure, contributing to a 15% reduction in application delivery time versus prior-generation tooling.

- Led targeted technical debt remediation across the existing technology stack, cutting security vulnerability exposure by 5% and improving deployment throughput by 8% through modernized dependency management and code refactoring.

Senior Software Engineer | Intel Corporation

January 2018 – February 2021

- Served as lead developer on an Agile team delivering enterprise-grade hiring applications, validating requirements and user stories against business expectations through each sprint cycle.
- Owned end-to-end design, implementation, and maintenance of CI/CD pipelines for Angular, Node.js, and .NET Web applications using GitLab, Cloud Foundry, Kubernetes, and Harbor, cutting release cycle time by 15–30% versus manual processes.
- Designed, coded, tested, documented, and debugged web applications across the full SDLC; facilitated Agile ceremonies including sprint planning, retrospectives, and backlog grooming for the Agile Program Team.

Application Developer | Intel Corporation

February 2015 – December 2017

- Built and maintained CI/CD pipelines for Angular and .NET Web APIs using GitHub, TeamCity, SonarQube, and an in-house deployment platform, ensuring consistent and auditable release processes across the HR technology portfolio.
- Played a critical role in the global rollout of Workday as Intel's enterprise HR system, replacing and transforming legacy HR applications and reducing HR process execution times by 20–50% across recruitment, payroll, and employee management workflows.
- Served as technical owner of Intel's primary employee data repository, managing data integrity, access controls, and system stability for one of the organization's most sensitive internal platforms.
- Supported and maintained infrastructure and continuous integration capabilities for the HRS platform, overseeing Windows Servers, TeamCity, SonarQube, GitHub, and Platform Manager environments.

Production Support Specialist | Intel Corporation

September 2013 – March 2015

- Developed and maintained human resources applications covering US and Latin America payroll, recruitment, sabbatical tracking, employee stock programs, and Workday integrations.
- Coordinated with support teams across multiple geographic regions to sustain 24/7 coverage for production HR systems, minimizing downtime impact on global workforce operations.

Production Support Specialist L3/L4 | SOIN Soluciones Integrales

April 2012 – August 2013

- Provided L3/L4 application support for Oracle/Unix environments used by ICE (Plan PESSO), a government-critical telecommunications platform serving over 6 million active 3G mobile accounts.
- Acted as System Analyst and release owner, managing new deployment rollouts and leading migration and stabilization activities into the production environment for high-stakes government infrastructure.
- Diagnosed and resolved critical production incidents with potential impact across millions of end users, working under strict SLA obligations and coordinating with multi-team technical stakeholders.

Quality Assurance Tester | SOIN Soluciones Integrales

November 2010 – March 2012

- Designed and executed system-level tests across pre-production and production environments, verifying functional stability and regulatory compliance ahead of critical government system releases.

EDUCATION

Master of Business Administration (MBA), Finance Specialization

2015 – 2017

Tecnológico de Costa Rica (TEC) — Costa Rica

Licentiate Degree, Systems Engineering

2011 – 2014

Universidad Latina de Costa Rica — Costa Rica

Bachelor's Degree, Computer Science

2008 – 2010

Universidad de Costa Rica (UCR) — Costa Rica

LANGUAGES

- English — Full Professional Proficiency (C2)
- Spanish — Native / Bilingual Proficiency
